(54) Title: METHOD AND APPARATUS FOR QUERYING RELATIONAL DATABASES

(57) Abstract: The invention provides a method of evaluating a query involving a relational database comprising a relational database management system (RDBMS), said query relating to at least one table of said relational database, said method comprising determining a table as a gateway table for evaluating said query, retrieving one or more unique identifiers of said gateway table related to one or more entries in a table to be queried, retrieving information from tables to be queried related to said retrieved unique identifiers of said gateway table, and providing a result set comprising the retrieved primary keys of the gateway table in relation to said retrieved information. The invention further provides a related data processing system and program.
